Mr. Andy Leimer  
Federal Communication Commission  
7435 Oakland Mills Road  
Columbia, MD 21046

Dear Mr. Leimer:

The Spectrum Engineering Services has received the MGL Avionics' letter dated February 17, 2009 regarding request for Federal Communications Commission (FCC) certification of the very high frequency (VHF) transceivers, Model #: V10, FCC ID: WSJV10. The FAA Spectrum office has no objection to the FCC certification of the MSJV10 avionics equipment, operating with 25 kHz channel spacing in the VHF 118-136.975 frequency band.

Applicants for FCC certification, of avionics equipment, should be aware that with aircraft implementation of Global Navigation Satellite System (GNSS) receivers, along with VHF transceivers could, without proper filtering of the VHF transceiver harmonic emissions (per TSO-C169), have a potential for interference to be caused by the VHF transceiver to the on-board GNSS receiver.

If you require any additional information, please contact Ms. Annette Allender, Electronics Engineer, Spectrum Planning and International Office, at (202) 267-3893.

Sincerely,

Robert A. Frazier  
Manager, Spectrum Planning  
and International Office
